

# BSK83 PEELPRO CLEAR CHEMICAL ABRASION MASK

## WHAT IS IT?

BSK83 PEELPRO CLEAR is a chemical abrasion mask formulated mainly with alpha and beta hydroxy acids and depigmenting active ingredients. It has combined the exfoliating action of salicylic acid, citric acid and lactic acid, with the depigmenting power of the combination of kojic acid and Arbutin, complemented with the antioxidant effect of ascorbic acid (Vitamin C). It has been formulated at a pH of 2.5 to favor the exfoliating effect of alpha and beta hydroxy acids and the inhibiting activity of tyrosinase.

## ACTION

The combination of the exfoliating effect of alpha and beta hydroxy acids with the inhibiting activity of tyrosinase, as well as the inhibition of melatonin formation, make it a perfect product for the treatment of non-homogeneous hyperpigmentation due to sun exposure, localized melasma or hormonal pigmentation.

## COMPOSITION

Citric Acid	5,0000%
Salicylic Acid	5,0000%
Kojic Acid	3,000000%
Arbutin	1,00000%
